Hochiki America Corporation
7051 Village Drive, Suite 100
Buena Park, CA 90621

November 11, 2026

This letter provides information regarding the compatibility status of the Hochiki ACF-V multi-criteria smoke, heat, and carbon monoxide detector with the following control panel products:

- Hochiki America L@titude
- VES L@titude
- VES Compas

The control panel must be using firmware version UL1204.03.006 or higher.

The ACF-V is UL listed and has successfully completed UL compatibility testing with the control panels identified above. The remaining administrative requirements are expected to be completed in January 2027, at which time revised control panel manuals will be available identifying the ACF-V as a compatible detector.

Although the ACF-V is currently available for purchase, it will not appear in the L@titude or Compas control panel compatibility documentation until the UL project is formally completed. All required compatibility testing has been completed successfully, and only the final administrative steps remain.

This letter may be provided to the Authority Having Jurisdiction (AHJ) as documentation of Hochiki America's successful internal testing and completion of UL compatibility testing with the identified control panels. Acceptance of the ACF-V for installation prior to formal completion of the UL compatibility project is subject to applicable code requirements and approval by the AHJ.

Please note that the ACF-V will initially be supported only by the L@titude and Compas panels. Support for the FireNET Plus and Elite RS is planned for spring 2027. Until compatible firmware is available for FireNET Plus and Elite RS, Hochiki will continue to offer the ACD-V for those applications, while supplies are available.

If you need additional information, please contact Hochiki America or you may reach out to me directly. Thank you for your support.

Best regards,

Bill Denney
